Application for Full Stack Developer Position

Dear Hiring Manager,

I am writing to apply for the Full Stack Developer position on your team. As a Full Stack Developer with hands-on experience designing, developing, and maintaining scalable web applications using ASP.NET Core, React, Next.js, Entity Framework Core, and SQL Server, I am excited about the opportunity to bring my end-to-end engineering skills to your organization.

In my current role as a Full Stack Developer at Luxor Booking Tours, I own features from database to UI: designing scalable RESTful APIs in ASP.NET Core, building responsive React interfaces, and structuring SQL Server databases to support core business logic. I apply Clean Architecture and SOLID principles throughout, which keeps the codebase maintainable as it grows, and I have implemented JWT-based authentication and role-based authorization to secure application endpoints. I participate in architecture discussions, code reviews, testing, and deployment, and I collaborate closely with cross-functional teams to ship reliable, production-ready features.

Beyond my current role, I have built several full-stack projects that reflect this same end-to-end ownership. I developed a complete Hospital Management System using ASP.NET Core Web API, React, and Entity Framework Core, implementing secure authentication, RBAC, and responsive frontend dashboards for patient, appointment, and staff management. I also built Farhetak, a wedding hall booking platform, and a tour booking platform, both combining scalable ASP.NET Core backends with React front ends to deliver complete reservation and availability workflows integrated with real business rules.

What I enjoy most about full-stack development is the ability to think about a problem holistically, from data modeling and API design through to the interface a user actually interacts with. I care about writing clean, well-architected code on both sides of the stack, and I am comfortable moving between backend and frontend work as a feature requires. I am eager to bring this versatility, along with my experience in API development, frontend architecture, and database design, to a team building scalable, maintainable software.

I would welcome the opportunity to discuss how my experience across ASP.NET Core, React, Next.js, and SQL Server can contribute to your engineering team. Thank you for considering my application, and I look forward to the possibility of speaking with you further.

Sincerely,

Ezz Abdelmoez Ahmed Mohamed
