

Ezz Abdelmoez Ahmed Mohamed

FULL STACK DEVELOPER | .NET / REACT

Software Development · APIs · Web Applications · Desktop Systems

APPLICATION: SOFTWARE DEVELOPER

[Portfolio ↗](#)

PROFESSIONAL INTRODUCTION

Dear Hiring Manager,

I am writing to apply for the Software Developer position. I am a full-stack developer who builds end-to-end web applications with ASP.NET Core, React, Entity Framework Core, and SQL Server. My experience spans API design, relational data modelling, authentication and authorization, responsive user interfaces, and the delivery of booking and management workflows that address real operational needs.

WHY I AM A STRONG FIT

In my recent role as a Full Stack Developer at Luxor Booking Tours, I developed and maintained a tour-booking platform, building scalable ASP.NET Core APIs and responsive React interfaces for tour, availability, and reservation flows. I have also supported reliable day-to-day operations as an IT Support Intern with the Agricultural Bank of Egypt, where I handled system maintenance, software updates, and technical issues across multiple branches. This combination gives me both strong engineering fundamentals and a practical understanding of how software performs in real business environments.

TECHNICAL EXPERTISE

Backend and Security ASP.NET Core Web API/MVC, C#, RESTful API design, Entity Framework Core, LINQ, JWT, RBAC, dependency injection

Frontend React.js, Next.js, TypeScript, JavaScript, HTML5, CSS3, TailwindCSS, responsive UI

Data SQL Server, relational database design, relationships and constraints, EF Core migrations, query optimization

Engineering Practices Git/GitHub, Agile/Scrum, clean architecture, SOLID principles, repository pattern, Vercel deployment

KEY PROJECTS

Hospital Management System: A secure healthcare platform built with ASP.NET Core Web API, React, Entity Framework Core, SQL Server, JWT, and role-based access control. It supports patient records, appointments, e-prescriptions, vital signs, staff workflows, and audit logs.

Farhetak Wedding Hall Booking Platform: A responsive booking product built with ASP.NET Core Web API, React, Entity Framework Core, SQL Server, and JWT. It includes venue search, photo galleries, availability calendars, conflict-aware reservations, and customer booking management.

Luxor Booking Tours: A full-stack tourism platform for browsing tours and managing availability and reservations. I owned features end to end—from SQL Server data models and ASP.NET Core APIs to the React interface—and contributed to ongoing maintenance, performance work, and feature delivery.

CLOSING STATEMENT

I would welcome the opportunity to bring my full-stack perspective, secure API experience, and practical approach to building reliable products to your development team. Thank you for your time and consideration. I look forward to discussing how I can contribute to your organization.

Sincerely,

Ezz Abdelmoez Ahmed Mohamed
