[Software Engineer — Ezz Abdelmoez](#)

Application for Software Engineer Position

Dear Hiring Manager,

I am writing to apply for the Software Engineer position on your team. As a Software Engineer with hands-on experience designing, developing, and maintaining scalable web applications using C#, ASP.NET Core, React, SQL Server, and Entity Framework Core, I am excited about the opportunity to bring my technical skills and engineering mindset to your organization.

In my current role as a Software Engineer / Full Stack Developer at Luxor Booking Tours, I design and build RESTful APIs, develop responsive front-end interfaces, and optimize SQL Server databases to support core business operations. I place strong emphasis on Clean Architecture and SOLID principles in everything I build, which allows me to deliver code that is not only functional but also maintainable, testable, and easy for teams to extend over time. I have also implemented JWT-based authentication and role-based authorization to secure application endpoints, and I collaborate closely with cross-functional teams throughout the full Software Development Lifecycle in Agile environments.

Beyond my current role, I have applied these same principles to independent projects, including a Hospital Management System built with ASP.NET Core Web API, React, and Entity Framework Core, where I implemented secure authentication, role-based access control, and scalable backend APIs to manage patient records and appointments. I also developed Farhetak, a wedding hall booking platform, where I designed backend REST APIs and relational database structures alongside a responsive React front end. These projects reflect my genuine enjoyment of solving real business problems through well-architected, database-driven software, and my comfort working across the full stack from database design through to the user interface.

What draws me most to software engineering is the opportunity to combine strong technical fundamentals with practical, business-driven problem solving. I approach every project by thinking first about scalability, security, and long-term maintainability, and I take pride in writing clean, well-structured code that a team can build on with confidence. I am eager to bring this mindset, along with my experience in API development, database design, and full-stack delivery, to a team where I can contribute from day one and continue to grow as an engineer.

I would welcome the opportunity to discuss how my background in C#, ASP.NET Core, React, and SQL Server can contribute to your engineering team. Thank you for considering my application, and I look forward to the possibility of speaking with you further.

Sincerely,

Ezz Abdelmoez Ahmed Mohamed
